

MANUEL - INSTALLATION

Flag

FLAG WITH ROPE AND TOGGLE

#1 Insert the toggle inside the eyelet at the top of the flagpole which is semi-open.
(It is not necessary to close the eyelet, the toggle is sufficient to hold the flag.)

#2 Insert the **flag rope** into the lower eyelet and **tie three (3) knots in it**.

**** Make sure that the flag is installed perfectly straight without being fully stretched.**

NOTE: This **type of finish** is standard on **all country and custom flags**.
It is the most durable type of finish in the medium to long term.

FLAG WITH EYELETS

#1 Securely **close the top eyelet of the flagpole with pliers**, then attach the top eyelet of the flag to the eyelet of the pole using a TyRap.

#2 Attach the **lower eyelet of the flag** to the **lower eyelet of the pole** with a TyRap.

NOTE: **Cut the tie as short** as possible to avoid damaging the flag by rubbing.

**** Make sure that the flag is installed perfectly straight without being fully stretched.**
